Memo

To: Board of Directors
From: Staff
Date: October 18, 2022
Subject: Drought Legislation

Here is an update on recent legislation affecting per capita use. The current standard has been lowered to 42 gallons per capita per day for the year 2030. As we are currently under the restrictions for the 50 gallons per day, moving forward it will be important to educate and inform our customers that this allowance will be changing and that adaptation will be necessary to be within compliance.
