CDs

Certificates of Deposit (CDs), including Market Indexed CD s and Market Linked CDs (collectively, MCDs) are generally shown at estimated market prices based upon a matrix or model pricing method that may not represent the actual price if sold prior to maturity. However, CDs and MCDs may be shown at face value for up to seven calendar days from date of issue if estimated market prices have not been received from a third party pricing vendor. The actual value of CDs and MCDs may be different from their purchase price. CDs and MCDs are subject to interest rate risk. The estimated market price reflected for MCDs may not be based on the actual closing value of the linked market index on the final maturity date and the market value of MCDs may not correspond directly to increases or decreases in the underlying linked market index. You may sell CDs or MCDs in the secondary market subject to market conditions. The secondary market for CDs and MCDs is generally illiquid. If sold prior to maturity, the value of MCDs may be less than the purchase amount or face value. The sale or redemption of any fixed income security prior to maturity may result in a substantial gain or loss, and an early withdrawal penalty may apply. Certain MCDs may only be redeemed on pre-specified liquidation dates and may have call features that allow the issuer to call the MCD prior to maturity. Certain Step Rate CDs are also subject to reinvestment risk if call provisions are exercised by the issuer and if a CD with a comparable rate is not available.
